

METHOD AND COMPUTER SYSTEM FOR SCHEDULE BIDDING

ABSTRACT OF THE DISCLOSURE

A method and computer system for assigning one or more
schedules to a plurality of entities such as agents or
5 employees. Schedules are posted online and can be viewed
by, and bid upon, the entities to be scheduled. Entities
preferably enter their individual schedule preferences.
Schedules preferably are sorted in order of priority, based
on the entity's preferences. The entities then bid on the
10 schedules. The bidding for each set of schedules is then
closed. The supervisor then initiates a process that sorts
the entities in a specified order and assigns a schedule to
each of the entities, based on their bids.
